

3. Working with groups

Create a group:

The screenshot shows the AWS IAM console interface. The breadcrumb navigation at the top reads "IAM > Users > ajay". The left-hand navigation pane is expanded to "Access Management (IAM)", and within it, "User groups" is highlighted with a red rectangle. The main content area displays the "Summary" tab for the user "ajay". Key details include the ARN "arn:aws:iam::472008046327:user/ajay", creation time "March 11, 2026, 10:51 (UTC+04:00)", and console access status "Enabled without MFA". The "Security credentials" tab is selected, showing the "Console sign-in link" as "https://472008046327.signin.aws.amazon.com/console" and the "Last console sign-in" as "19 hours ago". A "Multi-factor authentication (MFA) (0)" section is also visible.

The screenshot shows the "User groups" page in the AWS IAM console. The breadcrumb navigation is "IAM > User groups". The left-hand navigation pane is expanded to "Access Management", and "User groups" is highlighted with a red rectangle. The main content area shows "User groups (1)" with a description: "A user group is a collection of IAM users. Use groups to specify permissions for a collection of users." Below this is a table with columns: "Group name", "Users", "Permissions", and "Creation time". One group is listed: "MCB6-GROUP" with 0 users, a "Defined" status, and a creation time of "4 months ago". In the top right corner, there are "Delete" and "Create group" buttons, with the "Create group" button highlighted by a red rectangle.

Identity and Access Management (IAM) > User groups > Create user group

Create user group

Name the group

User group name

Enter a meaningful name to identify this group.

DEV_GROUP

Maximum 128 characters. Use alphanumeric and "+=, @ _ . -" characters.

Add users to the group - Optional (4) [Info](#)

An IAM user is an entity that you create in AWS to represent the person or application that uses it to interact with AWS.

Search

☐	User name	Group	Last activity	Creation time
