

A system with 4 nodes and 6 edges

Simple graph

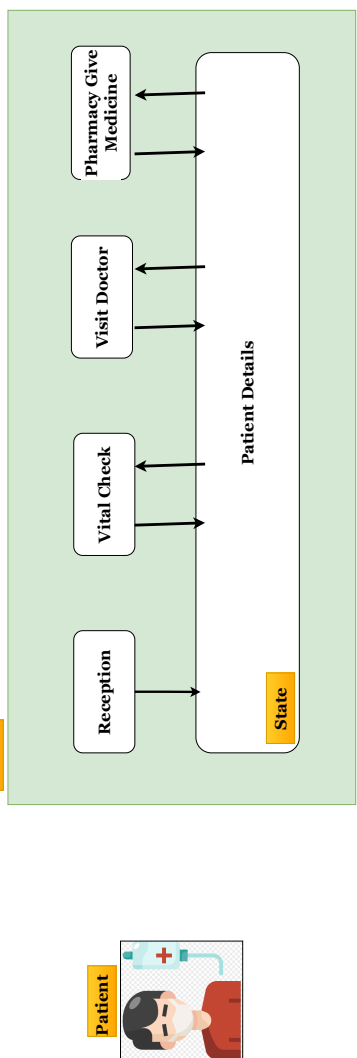

Language Technology

Output

Node is the internal feedback carried throughout the workflow.
Every node acts as a feedback loop, providing information from the data.
The data is then used to refine the data.

Language

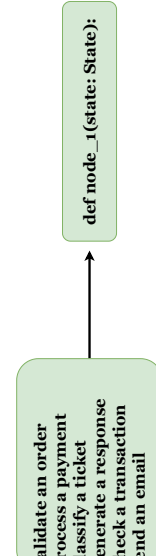

The language is the language of the system. It is a language that is used to describe the system and its components.

A. Node

A node is a unit of work.

In a graph, nodes are usually represented by circles.

Example

B. Edge

An edge connects two nodes in a graph.

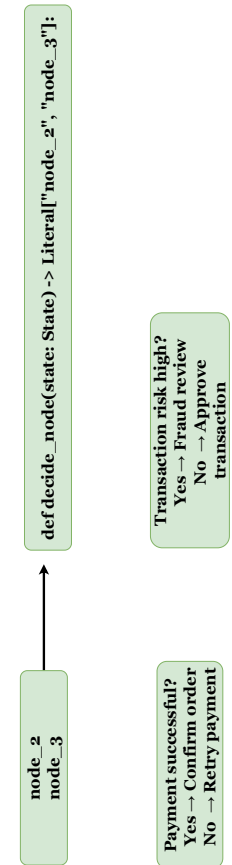

Example

A. Conditional Edge

A conditional edge is an edge that is only present if a certain condition is met.

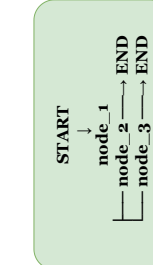

Example

B. Graph

A graph is a collection of nodes and edges.
